

Air Reel CRARY

A complete reel system equipped with high velocity air!

We know today that the most efficient thrashing comes from an evenly fed harvester. A constant, even flow of material in leads to the most efficient grain separation. Poor feeding, bunching at the cutter bar and crop simply shattering or falling off the leading edge can literally leave your profit in the field. Add an Air Reel and you'll add bushels to the hopper.

A constant stream of high velocity air quickly feeds crop back to the auger, eliminating bunching. The Crary Air Reel offers a better view of the cutter bar for improved visibility.

- 8" Crary fan with rotary screen
- Fits most major brands of headers.
- Powder coat paint for extra durability

The Air Reel provides benefits in more crops than just beans. Wheat, lentils, cereal grains, peas... these are just the beginning.

Crary's custom built fan provides a whirlwind of force, properly channeled directly to your cutter bar.

By replacing your factory reel you can add the benefit of air while keeping your header more compact, providing greater visibility.

“ I wouldn't harvest an acre of beans without it ever again! ”
Kevin M., Arlington, NE
