

# CHAFF SPREADER

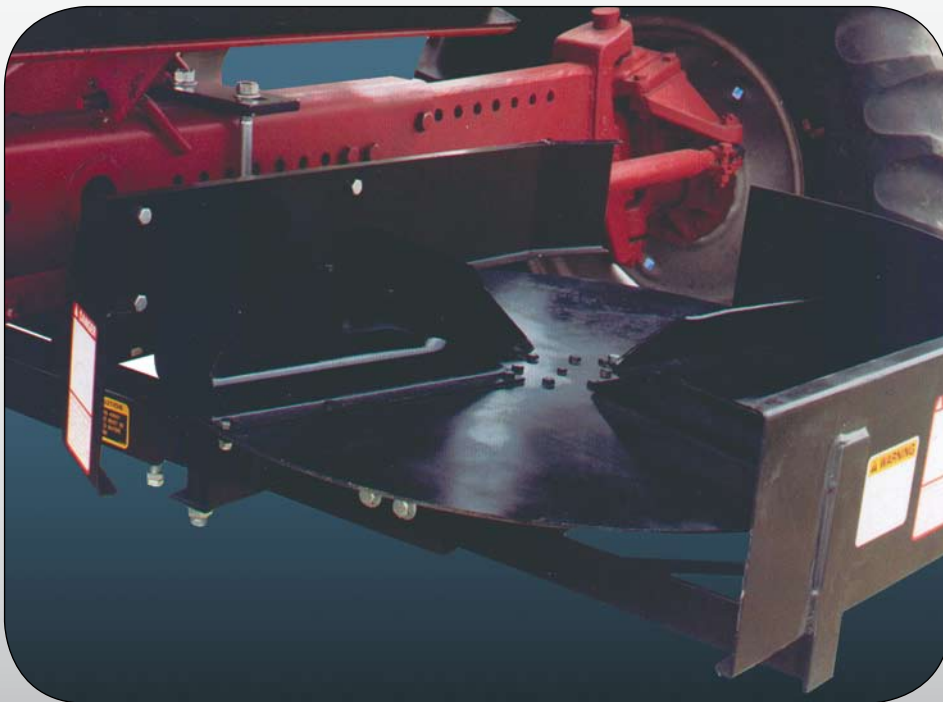

## Spread your workload efficiently!

Consistent soil temperature and moisture levels are maintained with the Crary Cyclone Chaff Spreader. Cyclone's hydraulic spinners maximize distribution, eliminating uneven soil drying and staggered wet strips. Perfect for larger combines and wider headers.

Tilting double disc units allow spinners to adjust from 0 to 10 degrees for more accurate chaff distribution and combine tire clearance.

Each spinner disc has 4 angled paddles for superior spreading. The front and rear shields are vertically adjustable. The spinner and shields are horizontally adjustable.

- Easy sieve access
- Adjustable front and rear shields
- Quick installation
- Eliminates residue issues
- Better use of chemicals for weed control
- Heavy gauge construction
- Powder coated paint for long-lasting durability

Single and tilting double disc Cyclones are available for all major combines.

Crary's double disc Cyclone Chaff Spreader

Cyclones come complete with hydraulic motor, hoses, fittings, flow valve and flow pans (where needed).

“I've had no trouble planting without tilling my bean fields.”
